

## Street Trees Table

**(Example)**

| <b>STREET</b><br>(length in linear feet) |               | <b>LARGE TREES</b><br>(quantity) |                 |                 |
|--|---------------|----------------------------------|-----------------|-----------------|
| <b>Name</b>                              | <b>Length</b> | <b>Required</b>                  | <b>Existing</b> | <b>Provided</b> |
| 1.                                       |               |                                  |                 |                 |
| 2.                                       |               |                                  |                 |                 |
| 3.                                       |               |                                  |                 |                 |
| 4.                                       |               |                                  |                 |                 |
| <b>TOTAL</b>                             |               |                                  |                 |                 |

**OBS:**

1. One (1) large tree for every fifty (50) linear feet of ROW adjacent to a development order parcel.
2. Large trees must have a minimum trunk caliper of 2.5 inches at the time of installation.
3. Root barrier control necessary for trees planted closer than five (5) feet to a street sidewalk or street curb.
4. No paving may be placed within ten (10) feet of any existing tree retained that is eighteen (18) inches or more DBH (Diameter at Breast Height).
